

DUNCAN ANDERSON

ACCOUNTING AUTOMATION ENGINEER

Montreal, QC (Eastern Time) | duncan@duncananderson.ca | duncananderson.ca/en | linkedin.com/in/duncan-kg-anderson | Open to fully remote work

Data analyst, automation engineer, and full-stack developer with 5+ years turning messy operational and payment data into accurate, repeatable systems. Strong in Python, SQL, Excel, APIs, multi-source data matching, dashboards, and exception-based workflows. Maps how work is done today, identifies failure points, builds controls around the automated path, and documents the result so finance and operations teams can maintain it.

RELEVANT CAPABILITIES

- Finance and operational data: Python, SQL, Excel, Google Sheets, CSV/system exports, payment and transaction data, reconciliation logic, variance analysis, reporting, dashboards
- Automation and integration: Make.com, REST APIs, webhooks, TypeScript/JavaScript, PostgreSQL/Supabase, Airtable, data cleanup, multi-system matching, repeatable scripts and workflows
- Controls and delivery: source-to-output validation, duplicate prevention, exception reports and queues, human review, traceability, monitoring, error recovery, process mapping, technical documentation, stakeholder handoff

RELEVANT EXPERIENCE

Independent AI Automation Consultant | 2026 - Present

- Review manual business processes, identify repeated data entry and fragile handoffs, then build practical automations, scripts, dashboards, and review queues around the actual source systems.
- Design workflows around explicit sources of truth, deterministic record matching, staged updates, and exception handling so uncertain records remain visible instead of being silently accepted or discarded.
- Delivered a property-operations system around Airtable that brought field updates, materials, contractor handoffs, and receipt records into clearer operational views while preserving the permanent record.
- Build and test Make.com, API, and webhook scenarios with normalized data, validation rules, duplicate protection, logs, failure paths, and maintainable runbooks.

Founder & Solo Developer, The Lineup | Oct 2025 - Present

- Designed, built, and operate a production analytics product spanning Python/FastAPI services, Next.js/TypeScript interfaces, PostgreSQL/Supabase, Redis, Stripe, RevenueCat, subscriptions, email, analytics, and web/iOS delivery.
- Built automated settlement and multi-source data pipelines with validation, freshness checks, duplicate protection, exception monitoring, and public result history.
- Built operational and admin tools to compare billing events, subscription access, application state, and provider data; investigate discrepancies; and keep production workflows accountable.
- Own production operations end to end, including Git-based CI/CD, Railway and Vercel deployments, monitoring, incident diagnosis, documentation, and customer-facing support.

AI Integration Specialist - Solutions Lab, FlightHub | Jul 2025 - Oct 2025

- Led delivery of AI and automation systems across business functions, translating loosely defined operational problems into repeatable production workflows.
- Built Dispute Defender, a high-volume financial workflow that gathered and matched booking, customer, and transaction records; classified dispute context; and assembled traceable evidence packages for operator review.
- Built a recommendation system that cleaned and combined inventory, route, timing, and historical-pricing data into ranked, reviewable outputs.

Data Analyst - Loss Prevention, FlightHub | Oct 2021 - Jun 2025

- Collected, cleaned, joined, and analyzed large operational and payment datasets using SQL, Python, Excel, statistics, and machine learning.
- Identified fraud patterns, payment risk, process gaps, and data-quality issues; built dashboards, exception analyses, and decision-support reporting for non-technical stakeholders.
- Worked across operational systems and system-generated files where accuracy, repeatability, and a clear explanation of the result were essential.

Frontend Developer, CHU Sainte-Justine Research Centre | Aug 2019 - Sep 2021

- Built and maintained healthcare web experiences using Webflow and custom code, including authenticated portals, CMS, SEO, and media workflows.

EDUCATION & LANGUAGES

Diploma, Data Science - BrainStation, 2021 | Certificate, Web Development - BrainStation, 2018 | Diploma, Journalism - Langara College, 2018 | English and French
